Kathmandu University

First In-Semester Exam-2025

Department of Artificial Intelligence, Panchkhal

Level: B.Tech Artificial Intelligence	Course: AIMA 203
Year: II	Semester: II
Time: 60 minutes	F.M. : 20

1. Round off the digits 45.321 and 12.987 upto two decimal places and find the error in their product after rounding off. [2]
2. Find a root of $x^3 - 4x - 9 = 0$, using bisection method, with absolute error less than 10^2. [4]
3. Describe error due to truncation. Find a root of $f(x) = xe^x - 1 = 0$, correct to 2 decimal places. [1+3]

First In-Semester Exam-2025

Department of Artificial Intelligence, Panchkhal

Level: B.Tech Artificial Intelligence	Course: AIMA 203
Year: II	Semester: II
Time: 60 minutes	F.M. : 20

1. Round off the digits 45.321 and 12.987 upto two decimal places and find the error in their product after rounding off. [2]
2. Find a root of $x^3 - 4x - 9 = 0$, using bisection method, with absolute error less than 10^2. [4]
3. Describe error due to truncation. Find a root of $f(x) = xe^x - 1 = 0$, correct to 2 decimal places. [1+3]

1. Solve using LU-factorization method. $3x_1 - x_2 = -1, \quad -x_1 + 3x_2 - x_3 = 7, \quad -x_2 + 3x_3 = 7$. [4]

2. Determine whether the matrix is ill-conditioned or not.$A = \begin{bmatrix} 25 & 24 \\ 66 & 78 \end{bmatrix}$. [2]

3. Using Lagrange's method estimate the value of $y(202)$ from the following data: $(200, 5.2983), (203, 5.3132), (206, 5.3278), (210, 5.3471)$. [4]

4. Solve using LU-factorization method. $3x_1 - x_2 = -1, \quad -x_1 + 3x_2 - x_3 = 7, \quad -x_2 + 3x_3 = 7$. [4]

5. Determine whether the matrix is ill-conditioned or not.$A = \begin{bmatrix} 25 & 24 \\ 66 & 78 \end{bmatrix}$. [2]

6. Using Lagrange's method estimate the value of $y(202)$ from the following data: $(200, 5.2983), (203, 5.3132), (206, 5.3278), (210, 5.3471)$. [4]
